ATTENTION: ONLY LICENSEES CURRENTLY ENROLLED IN THE PASSPORT UPDATE PROGRAM (PUP) ARE PERMITTED TO INSTALL AND USE, SUBJECT TO THE TERMS AND CONDITIONS OF THE LICENSE AGREEMENT BELOW, THE ENCLOSED SOFTWARE.

License Agreement

1. License Grant

Passport Software, Inc. (Passport) hereby grants to Licensee and Licensee accepts a non-exclusive license for the enclosed Software with the rights, terms, and conditions as detailed in this License Agreement:

- a. You may install and use the Software on a single computer system or single computer file server for your own internal business purposes provided you (the Licensee) do not exceed the number of concurrent users licensed by Passport to access the Software. If Licensee wishes to increase the number of licensed concurrent users, Licensee must contact Licensee's Passport Partner (your Passport Software supplier) or Passport directly.
- b. You may make backup copies of the Software as required for your own internal business purposes provided that you reproduce all copyright notices and other proprietary notices on each copy made. Backup copies may be used at any time to re-install the enclosed Software in the event of loss, destruction, or other malfunction of the Software.
- c. You may only transfer the Software and this license to a successor to the whole of Licensee's business, provided the successor agrees to accept the terms and conditions of this agreement. If you transfer the Software, you must report to Passport the name of the new user of the Software, and you may not retain any copies of the Software yourself once you have transferred it. No other transfers of the Software are permitted without the prior written consent of Passport Software, Inc.

Licensee shall not export or re-export, directly or indirectly (including via remote access) the Software, Documentation or other information or materials provided by Passport hereunder, to any country for which the United States or any other relevant jurisdiction requires any export license or other governmental approval at the time of export without first obtaining such license or approval from Passport. It shall be Licensee's responsibility to comply with the latest United States export regulations, and Licensee shall defend and indemnify Passport from and against any damages, fines, penalties, assessments, liabilities, costs and expenses (including reasonable attorneys' fees and court costs) arising out of any claim that Software, Documentation, or other information or materials provided by Passport hereunder were exported or otherwise accessed, shipped or transported in violation of applicable laws and regulations. Licensee shall comply with all laws, legislation, rules, regulations, and governmental requirements with respect to the Software, and the performance by Licensee of its obligations hereunder, of any jurisdiction in or from which Licensee directly or indirectly causes the Software to be used or accessed. In the event that this Agreement is required to be registered with any governmental authority, Licensee shall cause such registration to be made and shall bear any expense or tax payable in respect thereof.

This non-exclusive license is effective for the useful life of the Software. However, this license will immediately terminate if you fail to comply with any term or condition of

this Agreement. Upon termination you must destroy all copies of the Software.

A new version of the Software replaces the version of the Software previously licensed. Use of a new Software version terminates the license to use that part of the Software replaced by the new Software version and Licensee shall destroy or return to Passport all copies of any prior Software version previously licensed.

EXCEPT AS STATED ABOVE, YOU MAY NOT COPY, TRANSFER, OR DISTRIBUTE THE SOFTWARE TO OTHERS, AND ANY UNAUTHORIZED COPYING, TRANSFER, OR DISTRIBUTION SHALL AUTOMATICALLY TERMINATE YOUR LICENSE.

2. Passport Update Program

Passport makes available its subscription update service (Passport Update Program - PUP) to licensees of the Software. Only licensees having current and up-to-date enrollment in PUP are permitted to install and use any Software updates. Contact your Passport Partner (your Passport Software supplier) or Passport directly to enroll in this program.

3. Passport's Proprietary Rights

The Software is copyrighted by Passport Software, Inc. and some portions of the Software are copyrighted by AcuCorp, Inc., a Micro Focus International PLC company. All rights reserved.

Passport and its third party licensors retain all proprietary and intellectual property rights in the Software and Documentation and in any trademarks affixed to the Software or the Documentation. Licensee shall not take any action inconsistent with such title and ownership. Licensee shall not alter or remove any printed or on-screen copyright, trade secret, proprietary or other legal notices contained on or in copies of any Software or Documentation. **LICENSEE ACKNOWLEDGES AND AGREES THAT THE SOFTWARE MAY CONTAIN CODE OR REQUIRE DEVICES THAT DETECT OR PREVENT UNAUTHORIZED USE OF THE SOFTWARE.** Licensee shall notify Passport immediately in the event of unauthorized possession or use of Software or Documentation.

Licensee is not permitted (a) to decompile, disassemble, reverse compile, reverse assemble, reverse translate or otherwise reverse engineer the Software, (b) to use any similar means to discover the source code of the Software or to discover the trade secrets in the Software, or (c) to otherwise circumvent any technological measure that controls access to the Software.

Updates to the Software made available to Licensee through the Passport Update Programs shall be treated for all purposes as Software under this License and all intellectual property rights therein shall be retained by Passport.

4. Limited Warranty and Disclaimers

Passport warrants that the CD-ROM and/or other media on which the Software and User Documentation is recorded are readable by a compatible hardware system. For a period of 90 days (the Warranty Period) after the initial date of this license, if Licensee discovers any defects in the readability of the original CD-ROM and/or other media, Licensee may return it to Licensee's Passport Partner (your Passport Software supplier) or Passport for a free replacement, which is Licensee's sole and exclusive remedy in the event of such defect[s].

EXCEPT AS SPECIFICALLY PROVIDED HEREIN, THE SOFTWARE IS NOT ERROR-FREE AND IS BEING PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND.

PASSPORT SOFTWARE, INC., ITS PROGRAM LANGUAGE SUPPLIERS AND OTHER VENDORS, HEREBY DISCLAIM ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED, ORAL OR WRITTEN, WITH RESPECT TO THE SOFTWARE INCLUDING, WITHOUT LIMITATION, ALL IMPLIED WARRANTIES OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY, FITNESS FOR ANY PARTICULAR PURPOSE, COURSE OF DEALING OR TRADE USAGE.

NO WARRANTY IS MADE REGARDING THE RESULTS OF ANY SOFTWARE OR SERVICES OR THAT ALL ERRORS IN THE SOFTWARE WILL BE CORRECTED, REGARDLESS OF THE FORM OR NATURE OF ANY CLAIM. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF IMPLIED WARRANTIES, AND DO NOT ALLOW A LIMITATION ON HOW LONG ANY IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATIONS MAY NOT APPLY. NO PASSPORT EMPLOYEE, SUPPLIER, OR AGENT IS AUTHORIZED TO MAKE ANY MODIFICATIONS OR ADDITIONS TO THIS WARRANTY.

THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE SOFTWARE IS WITH YOU. SHOULD THE SOFTWARE PROVE DEFECTIVE, YOU ASSUME THE ENTIRE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION, AND ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES. IN NO EVENT WILL PASSPORT, ITS PROGRAMMING LANGUAGE SUPPLIERS AND OTHER VENDORS, DISTRIBUTORS, OR DEALERS (PASSPORT PARTNERS) BE LIABLE FOR ANY DAMAGES,

INCLUDING LOSS OF DATA, LOSS OF PROFITS, OR DIRECT, OR INDIRECT, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES RESULTING FROM ANY DEFECT IN THE SOFTWARE, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF IMPLIED WARRANTIES OR LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU.

THE FOREGOING RESTRICTIONS, DISCLAIMERS AND LIMITATIONS SHALL APPLY AND REMAIN IN FORCE EVEN IN THE EVENT OF A BREACH BY PASSPORT HEREUNDER OF A CONDITION OR FUNDAMENTAL TERM HEREUNDER, OR IN THE EVENT OF A BREACH WHICH CONSTITUTES A FUNDAMENTAL BREACH.

5. General Terms and Conditions

Nothing contained in this Agreement shall be deemed to constitute either party as the agent or representative of the other party, or both parties as joint venturers or partners for any purpose. Licensee's supplier of the Software (referred to herein as a "Passport Partner") is an independent contractor in relation to Passport and is not an employee, agent or partner of Passport.

This License Agreement is governed by the laws of the State of Illinois and jurisdiction for any claim or controversy raised by Licensee against Passport Software, Inc. shall only be in the Circuit Court of Cook County, State of Illinois.

If either party commences any action or proceeding against the other party to enforce or interpret this License, the prevailing party in such action or proceeding shall be entitled to recover from the other party the actual costs, expenses and attorneys' fees (including all related costs and expenses), incurred by such prevailing party in connection with such action or proceeding and in connection with obtaining and enforcing any judgment or order thereby obtained.

This License and the rights and obligations hereunder, may not be assigned, in whole or in part by Licensee, except to a successor to the whole of Licensee's business, without the prior written consent of Passport. In the case of any permitted assignment or transfer of or under this License, this License and all of its terms and conditions shall be binding upon, and inure to the benefit of, the successors, executors, heirs, representatives, administrators and assigns of the parties hereto.

This is the complete and exclusive statement of the License between you and Passport, and this License supersedes any prior agreements or understanding, oral or written, with respect to the subject matter of this License.

If you have any questions regarding this License, you may contact Passport at 847-729-7900 or email to psi@passport.com

Introduction

Your systems and Passport Business Solutions software are a critical part of your successful business operation. Passport Software, Inc. continues to improve and enhance the PBS software to help make using the software more enjoyable and productive.

There are two sets of instructions for installing PBS. One is for the SQL installation and the other is the Vision file install instructions. This document contains the Vision file install instructions. A Vision file installation includes installs for Windows, Linux and SCO UNIX.

Version 12.03 Standard Vision File Install and Upgrade Checklist

If you are familiar with a Standard Vision Installation and data upgrade you may use this checklist. This checklist is for the Windows installation. The Linux and SCO UNIX installs are similar. You will need to replace the executable commands with tar commands and the batch commands with script commands.

| COMPANY INFORMATION | |
|---|--------------------------|
| Company name: | |
| Address: | |
| Telephone number: | |
| Email: | |
| Primary Contact(s) | |
| Cutover date | |
| CHECKLIST | |
| <p>This step is optional. It is done on the system you are upgrading from. Empty transaction and purged history files require less time to upgrade. You may do the following:</p> <ul style="list-style-type: none"> • Post all un-posted transactions; like payables, invoices • Prepare financial statements and reports for post upgrade comparison • Back up your data • Get distributions in G/L. Purge distribution files in A/P, A/R, I/C, J/C and Payroll. • Large history files take the most time to upgrade. Therefore, purge history and any other data that is no longer needed | <input type="checkbox"/> |
| <p>Prepare data exports. The details for this step are found in PBS_EZ_Convert.pdf. From the version being upgraded from</p> <ul style="list-style-type: none"> • Run ctlutil in current install and create export of the control files • Run exfutl in current install and create export of the data files | <input type="checkbox"/> |
| <p>Download the following from the FMS site:</p> <ul style="list-style-type: none"> • The PBS license. The file name may include information about the company and expiration date. If this is the case rename it to RW.LIC after downloading it and before running the install • The current full install, update install and hot fixes (when available) • Download Wininstall1203.exe • Download the latest updates and hot fixes for 12.03 | <input type="checkbox"/> |
| <p>Create a target folder for the installation. It should <u>not</u> be located in the windows <i>Program files</i> folder. C:\PBS1203 would be fine. No spaces in the folder path is recommended.</p> | <input type="checkbox"/> |
| <p>Passport Business Solutions Installation:</p> <ul style="list-style-type: none"> • Note the Windows Pre-installation Requirements - Upgrade • Place the install package(Wininstall1203.exe) in the newly created empty target folder • Put the RW.LIC in this same folder • Run Wininstall1203.exe, this is a self-extracting zip file which contains the software and required runtime environment • Find and run PBSInstall.bat. This script will start the PBS installation program which will prompt you through the initial installation of PBS | <input type="checkbox"/> |

| | |
|--|--------------------------|
| <p>Update your new installation</p> <ul style="list-style-type: none"> • Check for Pre and Post Update considerations • Place the latest version of PBSUPDATES1203xx.EXE in the version 12 Top Level folder • Run PBSUPDATES1203xx.EXE • Find and run PBSUPDATE.BAT. This install script will identify your current version, create program backups and upgrade you environment to the most current release • Install hot fixes that match the update version number. For example, 12.03.0u.0h. The hot fixes must match the 0u update version. | <input type="checkbox"/> |
| <p>Optional: Update the Help environment.</p> <ul style="list-style-type: none"> • If you are using Internet help, Internet help is installed by default • If you are using local help, download the Local help install package. Local help is available for download. | <input type="checkbox"/> |
| <p>From the version being upgraded from, copy the control and data file exports to the new PBS version 12.0x EZEXP folder</p> | <input type="checkbox"/> |
| <p>Run pbscnvez to run the PBS EZ Convert utility. The details for this step are found in PBS_EZ_Convert.pdf.</p> <ul style="list-style-type: none"> • Verify that you have exported and moved/copied the control and data files to the new environment • Confirm that you have the MLTCMP.exp file for a multiple company install • Confirm that you have access to the SQPATH.DAT file from your previous installation • Determine if you want to maintain the same data file location under the Top Level that you used in the previous version • Find the previous version of SQPATH.DAT • Confirm multiple company file and upgrade the pathfile • Determine if you want to maintain the data file locations from your previous install • Run the Full or Custom conversion. If Full, then you can skip the next three steps: <ul style="list-style-type: none"> ○ Upgrade export files only? Normally you will answer N to this prompt. By answering yes the system will leave other data file behind including reports printed to disk etc. ○ Copy system wide files? Only applies to version 10 or 11 upgrades. If yes contents of RWMENU, PTCUS, PSIBxx, and IMAGES will be copied ○ Restore System wide files? If yes it will initialize and restore select system wide files if their exports exist | <input type="checkbox"/> |
| <p>Run PBS version 12.03 for the first time. Verify that users and passwords are set. If not, do that now. Verify that the user assigned menus are upgraded.</p> | <input type="checkbox"/> |
| <p>When needed, enter new users and define user menus.</p> | <input type="checkbox"/> |
| <p>If using Thin client, activate the license, configure and start the service. See the thin client documentation for details.</p> | <input type="checkbox"/> |
| <p>Perform workstation installs. If using Thin client then use the Thin client startup install.</p> | <input type="checkbox"/> |
| <p>Print and confirm financial statements and select reports from all modules to validate data conversion success.</p> | <input type="checkbox"/> |
| <p>Compare Control information from old version modules to new PBS v12.0x. Update new control fields as needed. Where needed, configure the modules for new features.</p> | <input type="checkbox"/> |
| <p>Demonstrate and train all your PBS users on the new features and functions.</p> | <input type="checkbox"/> |

Installation

Version 12.03 contains all PBS applications.

Windows Pre-installation Requirements - Upgrade

Microsoft Portable .Net Framework

PBS Version 12.03 utilizes the version 9.1 runtime which requires .NET Framework. You may already have .NET Framework installed, but if not, you must go to Microsoft's web site, download and install it for Windows 8, Windows 7 and Windows Vista. It is also needed if you run PBS while *on* the Windows Server 2003, Windows Server 2008 or Windows Server 2012.

The required version of .Net Framework for installing the start menu selections is 4.030319 or higher.

Data Conversion Required

No matter what version you are upgrading from, PBS Version 12.03 vision install is not an in-place installation. You must install Version 12.03 in a new folder and then use EZ Convert to convert data from the older version.

Do not install PBS in *Program files* or *Program files (x86)*. We recommend that you use C:\PBS\1203 or something similar.

See the EZ Convert documentation for a list of versions that can be upgraded. Download the latest online [EZ Convert doc](#).

Thin Client

If Thin Client is installed and running on your older system there are a few steps to get it running in Version 12.03.

The server portion of Thin Client is included with the install of PBS Version 12.03.

The runtime version has changed for PBS 12.03. Because of this a new product code and key to activate Thin Client on the server. If you do not have this product code and key contact your PBS provider before you start the installation. The product code and key must be Version 9.1.x.

The client (workstation) versions associated with Version 12.03 must be installed on *each* workstation that will access PBS. If you have existing client installs to v12.02 or earlier version, we recommend that you uninstall them.

You must know your IP address and port number in order to install both the client and server. Copy the documentation and client install which may be on a disk or available from the fms.pass-port.com site. For access to the FMS site you will need a login and password. The documentation is found in *updates > PBS_1203 > doc > PBS_ThinClient_Configuration.pdf*. Go to the *updates/CommonUtil* folder and download Thin Client location install. Extract it and run the start.exe executable from the workstation. You must have the correct IP address and port number to complete the install.

AcuXDBC

XDBC requires a new System Catalog. It contains files that have been added or changed in PBS v12.03. Download from the FMS site the latest XDBC System Catalog from the FMS site.

If you are upgrading from v12.00 or higher and you are running AcuXDBC v8.1.x, the Acucorp/MicroFocus XDBC product does not require a new product code and key. If you are upgrading from v11.x and using the older AcuODBC, you must purchase the new AcuXDBC.

If you wish to add AcuXDBC to your system you will receive the 9.x version

The AcuXDBC installation instructions are available on the PBS FMS site (fms.pass-port.com).

Windows Pre-installation Requirements- New Install

You must install PBS in a new folder. Create the folder first. We recommend that you install PBS using a path without spaces, especially if you are using Thin Client and AcuXDBC. Whether you have a 32-bit or 64-bit operating system, there is only one version of PBS to install.

When available, download any additional instructions for updates or hot fixes from the PSI FMS site located at the PBS FMS site. You will need a login and password to get to this site. If needed contact Passport Software for instructions. Download Wininstall1203.exe to the new folder you created above. Look in the *Updates > PBS_1203 > Win* folder.

If there are updates, hot fixes or documentation installs, download them as well. They are in the *Updates > PBS_1203 > Win > Updates* folder.

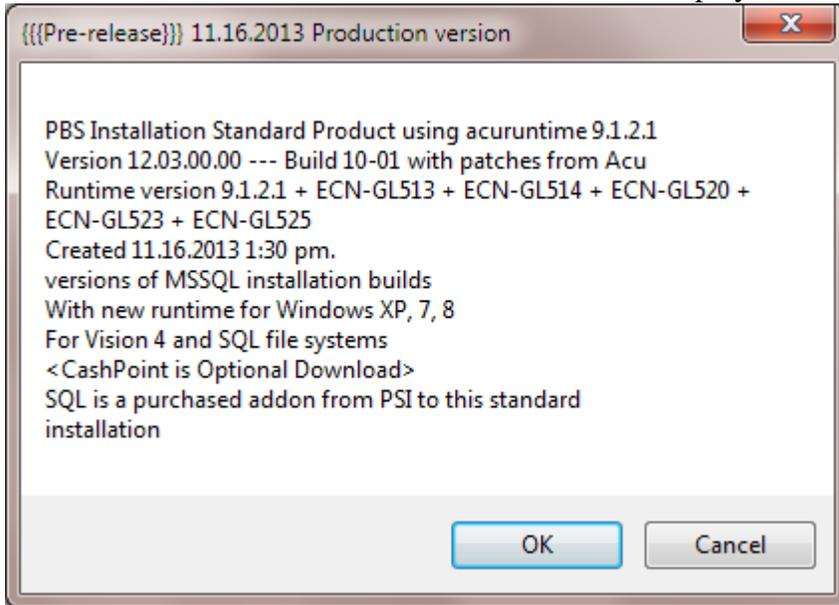

Following the installation, see the PBS Administration documentation and User documentation for instructions on configuring PBS. Select [PBS Documentation](#).

Windows Installation Steps

You cannot install PBS Version 12.03 over PBS 12.02, 12.01, 12.00, 11.x or any earlier version of PBS, RW2000 6.7 or RealWorld.

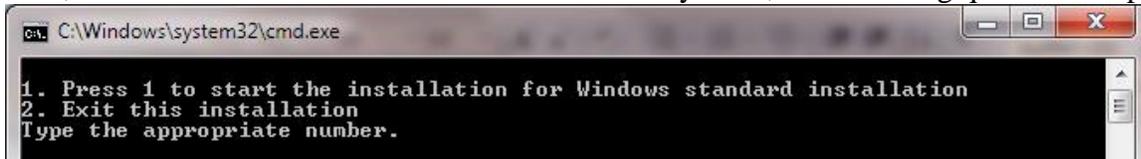

Copy the *Wininstall1203.exe* to the folder you created in the pre-install instructions. Also, put the RW.LIC PBS license file in the same folder. If the license file has a name like *RW – XYZ Company – ABC Associates-EXP12-31-12.LIC* you MUST RENAME it to *RW.LIC* before you run the install.

Run *Wininstall1203.exe*. A screen similar to below displays:

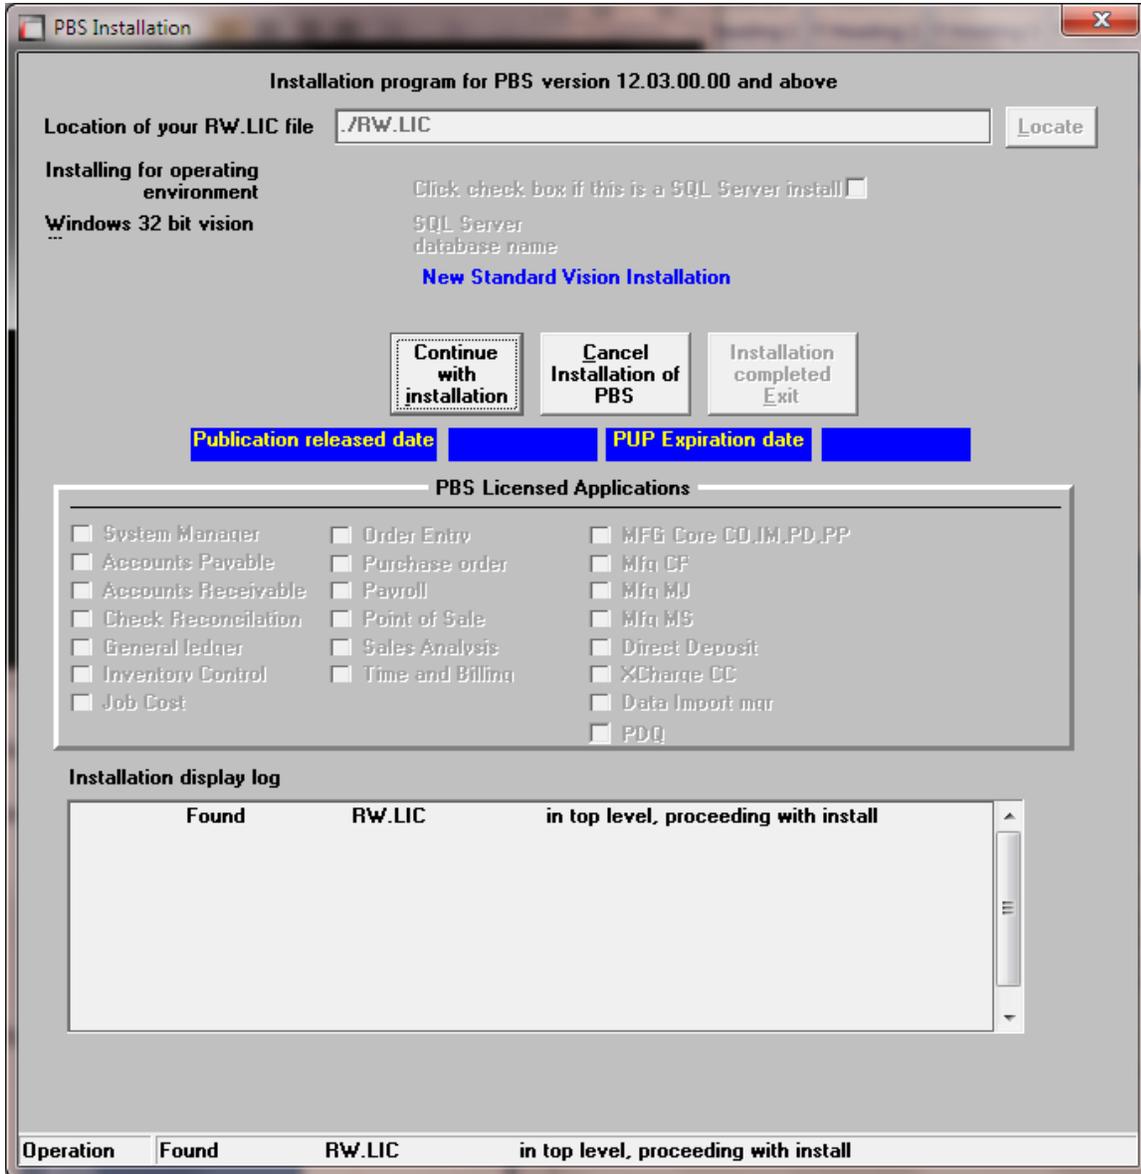

Select OK and it will run the extraction. About 32 files and four folders are extracted.

Next, look for *PBSINSTALL.BAT* and run it. When you do, the following questions display:

If you are not ready to install PBS, select 2 to Exit the installation. Otherwise, select 1 to start the standard Windows installation.

The extraction runs and the following screen displays:

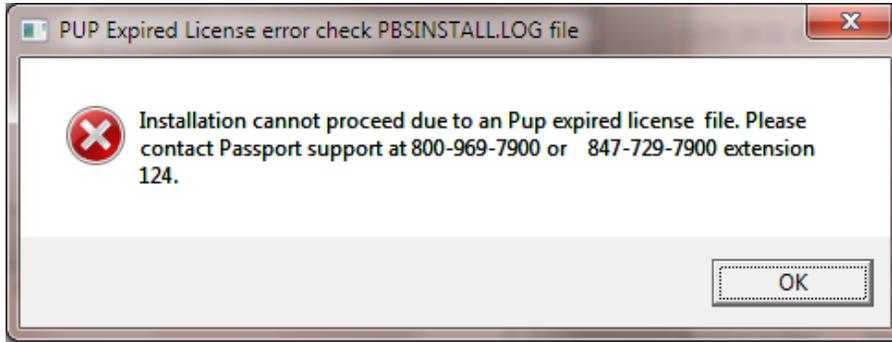

Using a Correct License

If you did not copy the RW.LIC file in you will have to find it via the *Locate* button. Remember, the license name must be RW.LIC.

Before installing v12.03 you may be required to update your RW.LIC license.

The Passport Update Program (PUP) date on your license must be February 16, 2014 or later. If you attempt to install PBS v12.03 with an RW.LIC license that that has a PUP date before February 16th, 2014, the following message displays:

“Pup” in the message above refers to the Passport Update Program.

- If you attempt to install PBS with a license that was created before PBS v12.02, the following message displays:

If you receive a message that the PUP has expired or you have an incorrect license contact Passport support at 800-969-7900 or 847-729-7900, both at extension 124.

Continue with installation

Once the RW.LIC is located, click on the *Continue with installation* button as seen here:

The program will extract the files appropriate for your installation. When that is done, the *Installation completed Exit* button is highlighted.

Click on it to finish. This completes the installation.

Do **NOT** run the pbsinstallforsql.exe. This is only needed for the PBS SQL installation. Your license probably does not allow the SQL install anyway. If it does you should continue using the PBS SQL install instructions.

Install Updates

We highly recommend that you install the latest update and hot fixes *before* you run EZ convert. Download the installation and documentation files from the [Passport FMS](#) site.

Post Installation

Set the permissions to the PBS system so that everyone who needs to access it has the proper rights.

Client Install

You must un-install the previous client install and install the new client shortcuts for PBS 12.03. This includes Thin client shortcuts.

See the section [Connecting Workstations to PBS](#) for details.

Opportunistic Locking

Other installation steps and information, including disabling opportunistic locking and more, are described in detail in the PBS Administration documentation. See the [PBS Administration Documentation](#).

Review the user documentation *Control information* settings. Depending on the version you are upgrading from, there may be new features that require settings. See the [PBS Documentation](#) section below.

EZ Convert

If you are upgrading from RealWorld version 8,9, RW2000 or an earlier version of PBS, see the [EZ Convert](#) documentation for instructions for upgrading your data.

Windows 8 and a PDF Reader

Windows 8 is installed with a default PDF reader. It has this symbol:

It will allow you to view PDF files that are generated from PBS, but it displays them in a separate window. For optimum viewing of PDF files download and install Adobe Reader or Adobe Pro.

Linux and UNIX Installation

For v12.03 you **MUST** be on a Linux glibc version 2.3.4 or higher. However, do not install PBS on a Linux glibc 3.0 or higher system.

You may be on SCO UNIX 5.06, 5.07 or 6.0.

Here are the steps for installing Linux

1. Using the RW.LIC, install the full system. See the [Pre-installation Steps](#) and [The Linux Installation Steps](#).
2. Install the update. This would be v12.03.uu.00 with uu representing the most recent update. See the appropriate update documentation available from the FMS site.
3. If available, install the hot fixes. The version numbers would be v12.03.uu.hh. You must install over the matching update version represented by uu. Install the latest hot fix (hh) version that matches your current update version.
4. Run EZ convert to convert your data from the previous version to v12.03. If you have more companies than 00 EZ convert will create them. View the conversion log (EZCONV01.LOG). There should not be any major errors.
5. Check your *Control information* for each module to verify that you have the correct settings for any new fields. This can vary depending on what version you are upgrading from. The older the previous version, the more likely there are changes. The EZ Convert documentation has some specific information on what to check.
6. Run reports in the old and new systems and compare the information to verify that your data is upgraded. This step is optional but highly recommended.
7. If you are using Thin Client, kill the old service and activate the new service. If you have **Linux** and you are upgrading from v12.00 or earlier, you will need a **new product code and key** for Thin Client activation as you must upgrade to AcuConnect 9.1 from Acucconnect 8.1. If you are upgrading from v12.01 you can use your current code and key.

Data Conversion

No matter what version you are upgrading from, PBS is not an in place installation. You must install Version 12.x in a new directory and then use EZ Convert to convert data from the older version.

See the EZ Convert documentation for a list of versions that can be upgraded. Download the latest online [EZ Convert doc](#).

AcuXDBC - ODBC

AcuXDBC requires a new System Catalog. Download from the FMS site the *xdbc_pbs.pdf* documentation. The upgrade instructions are in this document. Also download the new system catalog and other installation components that apply to your install.

For Linux you will **need a new product code and key**. You may have already done this after installing PBS v12.01, if not, you are required to upgrade to the 9.1 version of AcuXDBC Server.

Thin Client for Linux

You will be upgrading to PBS v12.03. Based on the version you are upgrading from, you may need a new AcuConnect for Thin Client product code and key as per this table:

| | Upgrade from PBS v11.x | Upgrade from PBS v12.00 |
|-------|----------------------------|----------------------------|
| Linux | Need new v9.1 code and key | Need new v9.1 code and key |

| | Upgrade from PBS v12.01 |
|-------|--------------------------------|
| Linux | Use existing v9.1 code and key |

The server portion of Thin Client is included with the install of PBS Version v12.03. If you do not have a product code and key, contact your PBS provider before you start the installation.

The client (workstation) versions associated with Version v12.03 must be installed on *each* workstation that will access PBS. Thin Client installations are available from the Passport FMS download or your disk (if you received a disk). For the FMS download use the <http://fms.pass-port.com/> address. For access you will need a login and password. The documentation is found in *updates/PBS_1203/doc/PBS_ThinClient_Configuration.pdf*. Go to the *updates/CommonUtil* folder and download the appropriate client install. Run the executable from the workstation. You must have the correct IP address and port number to complete the configuration and installation.

Pre-installation Steps

Copy the main install, the latest updates and hot fixes for Version v12.03 to your server. You must have a new RW.LIC file for a v12.03 install. Your RW.LIC file that you used for v12.01 and earlier will NOT work.

1. Create the directory where you want PBS installed. New with PBS 12.03, the runtime and other files have been moved to *bin* directory off the top level directory of PBS. This is to make it easier to locate and update certain files and programs and to clean up the PBS top level directory. Make sure the *bin* directory is added to the PATH as stated below;

- a. After creating the PBS install directory you should add the unambiguous path to the new install area. When you create a PBS directory,

/home/pbs, add this to the beginning of the path:

```
PATH=/home/pbs:/home/pbs/bin:$PATH; export PATH
```

PSI does not suggest adding "." to the PATH due to security issues, especially if running as root.

On an Ubuntu Linux server do not install PBS in the */home* folder. We have found that permissions are restricted in this folder. Create a folder like */apps* off the root of the file system and install it there.

For UNIX add this path: `PATH=$TLD:$TLD/bin:$PATH;export PATH`
An example is: `PATH=/usr/pbs:/usr/pbs/bin:$PATH;export PATH`

2. Copy from the *nix* directory on the PBS disk or download the install program to this new directory from the FMS site. The file is `lnxinstall1203.tar.gz`
For UNIX it is `unixinstall1203.tar.gz`
3. Copy the `RW.LIC` license to this directory. If you do not have an `RW.LIC` license contact your PBS provider or [Passport Software, Inc](#) for instructions. After the copy, verify that the case of your `RW.LIC` has not changed from upper case to lower case. If it has, move it to upper case. Also, if the license file has a long name which includes your company name and expiration date, you MUST rename it to `RW.LIC` before you start the install.

During the install process you may navigate to any directory where the license is, but having it in the same directory insures that the install program will find it.

The Linux and UNIX Installation Steps

The initial install of PBS installs programs and files for company 00. Other companies are created when you run `EZ convert` or use the add company procedure.

- A. To extract the install files, `gunzip lnxinstall1203.tar`
For UNIX `gunzip unixinstall1203.tar.gz`
- B. Then, `tar xf lnxinstall1203.tar` (untar runtimes, programs, and scripts)
For UNIX `tar xf unixinstall1203.tar`
- C. Run `pbsinstall` (script for installing PBS and appropriate runtimes)

A *nix* script screen displays.

Enter the appropriate runtime to be installed. It is very important to study this screen and make the right selection. If an incorrect selection is used the rest of the installation will not work. The UNIX screen is not provided, however the choice should be obvious. This is the Linux install screen:

```
I. any linux  glibc 2X 32 bit
J. any linux  glibc 2X 64 bit
K. solaris 10 glibc 2X 32 bit
L. solaris 10 glibc 2X 64 bit
X. Exit

Enter the appropriate letter:
█
```

After your selection, the runtime is extracted and the PBS installation program is started. If the RW.LIC file is found, a message like the following displays:

```
Processing the license file
RW.LIC found in top level, proceeding with installation.
Press <enter> to continue, or <Esc> to exit install
```

If the RW.LIC file is not present the program will prompt you for its location. Regardless, the RW.LIC file must be present on the server.

```
Processing the license file
Enter Directory location of RW.LIC press Esc to exit PBS install
```

When you see the screen above, you may enter a directory where the RW.LIC file is located. Example: /usr/temp

Once the RW.LIC is found, select <Enter> and the installation program goes through a series of processes which display on the screen similar to this:

```
Extracting      license file          5 to top level
New runtime license created      05 user count
Extracting      gunzip synix.tar.gz  SY
Extracting      tar xf synix.tar     SY
Extracting      gunzip sy.tar.gz     SY
Extracting      tar xf sy.tar        SY
Extracting      gunzip apnix.tar.gz  AP
Extracting      tar xf apnix.tar     AP
Extracting      gunzip ap.tar.gz     AP
Extracting      tar xf ap.tar        AP
```

At completion the program will present the screen similar to below:

```
Deleting      sa.tar              SA
Deleting      tbnix.tar           TB
Deleting      tb.tar              TB
Deleting      mf.tar              MF
Deleting      symfgnix.tar        MF
Deleting      symfg.tar           MF
-----
Clean up in process.....
Deleting      NEWMENU.DAT         From top level
Deleting      NEWPATH.DAT        From top level
Deleted installation
Installation                                     PBS Manufacturing is included
Installation                                     Completed for PBS
Date: 01/05    Time: 1204
Installation complete, you may view or print the PBSINSTALL.log located in the top
level directory.

Press any key to exit
```

Pressing any key here exits the installation program and the software is ready for editing or upgrading data using EZ Convert.

Post Installation

Copy in the latest update and any hot fixes that apply to your system. Install them.

If you upgraded from a previous version, you may need to verify that the path to the runtime is correct. To handle this, put the full unambiguous path of the new installation into the beginning of the PATH environment instead of using a period.

See the [EZ Convert](#) documentation for instructions for upgrading your data.

Following the install, see the PBS Administration documentation and User documentation for instructions on configuring PBS. Select [PBS Documentation](#).

If you are implementing Thin Client see the [Thin Client for Linux](#) section. Also see the next section on the client installs.

If you have AcuXDBC Server, see the [XDBC - ODBC](#) section.

This completes the installation.

Connecting Workstations to PBS

Three methods are available for configuring a workstation to access your installation of PBS:

Thin Client

The PBS Thin Client is a small footprint application that essentially represents PBS as a local application to the workstation but utilizes the Server to do all the heavy lifting. This greatly enhances the performance of PBS and reduces network traffic significantly. This feature also enables delivery of the application over the internet through a secure proprietary encryption protocol -- ideal for large installations and any installation with remote users whether there are one or many.

This product is licensed separately from the PBS option. To activate Thin client on the server you need an AcuConnect 9.1.x product code and key. Activation instructions are in the Thin client documentation downloadable from the FMS site as stated in the next paragraph.

Note: If you are upgrading from a previous version of PBS and you installed the older start menu selections for accessing Thin client with PBS on a *Windows Server*, to avoid having two sets of start menu selections, uninstall the older version before you install the new version. You may do this in *Programs and Features* found under *Control Panel*. Look for *Passport Software* on the list of installed programs and features. The Linux start menu selections will work as is.

You need the workstation Thin client startup install. For Thin client installation instructions see *PBS_ThinClient_Configuration.pdf*. The install and documentation are downloadable from the Passport's FMS site. Use the <http://fms.pass-port.com/> address. For access you will need a login and password. The documentation is found in *updates/PBS_1203/doc*. Go to the *updates/CommonUtl/1203Startup* folder and download the *pbs1203tc9121.exe* for PBS on Windows Server or the *pbs1203tc910.exe* executable for PBS on a Linux Server.

Run the executable from the workstation. You must have the correct IP address and port number to complete the install.

Terminal Services

Terminal Services can be set up using a number of tools, most notably Microsoft Terminal Services/Remote Desktop Connection and Citrix XenServer/XenDesktop. The primary advantage of these solutions is the use of the server horsepower for processing and reduced load on the network. We will defer to those companies and your network administrator for setup of these types of services.

Be sure to install the PBS fonts on the server. They are located in the fonts folder under the top-level PBS folder. This will need to be done for each user login.

There are some limitations to printer use when printing forms on terminal services. If you are unable to set up a usable Company information printer for printing forms, then you cannot use this method.

Install the Local Network Share Access

For network sharing, install the pbs startup. This installs the start menu selections and fonts needed for PBS. This install is downloadable and if you received the PBS via a disk, it is available from the disk in the pbs_startup folder.

Note: If you are upgrading from a previous version of PBS and you installed the older start menu selections, to avoid having two sets of start menu selections, uninstall the older version before you install the new version. You may do this in *Programs and Features* found under *Control Panel*. Look for *Passport Software Start Menu Items*.

To download, use the <http://fms.pass-port.com/> address. You will need a login and password. Go to the *updates/CommonUtil/PBS1203Start* folder. Create a folder called Temp on the workstation C drive, copy the *PBSStartIconInstall.exe* file to that folder and run the executable from the workstation. If you have to install it for an additional user on the same workstation, copy the executable install to a different temporary folder and install it from there.

Note: Verify that the fonts install. It has been found that the install program is not working consistently. As a backup we recommend that you copy the fonts from the top-level PBS fonts folder to the workstation. Highlight the fonts, right click and select Install. *If they are already installed a message will indicate this. Otherwise it will install the fonts.* A new version of the workstation install will be provided when it is ready.

For information on modifying the shortcuts, using the original colors, uninstalling the shortcuts and more, see the *Workstation Install/Configure* chapter in the PBS Administration documentation.

Uninstall Old Startup

This is regarding the old startup intended for 12.02 and earlier. The uninstall is done from Control panel > Programs and features. Look for Passport Business Solutions. The uninstall removes a file called Uninst.isu from the top-level PBS. This file is needed for each short cut uninstall for each workstation. Save a copy of this file before you do the first uninstall. If you have already removed the file, there is a zipped copy of this file on the FMS site in the CommonUtil folder. Extract it into the top-level PBS.

Windows 8 and PDF Reader

Windows 8 is installed with a default PDF reader. It uses this symbol:

It will allow you to view PDF files that are generated from PBS, but it displays them in a separate window which makes it difficult to get back to PBS. For optimum viewing of PDF files download and install Adobe Reader.

PBS Documentation

PBS documentation is available online. This is a full set of documentation for each PBS application. Select from the links below:

| | |
|--|---|
| Accounting | Distribution |
| <u>System</u> <u>Accounts Payable</u> <u>Accounts Receivable</u> <u>Check Reconciliation</u> <u>General Ledger</u> <u>Payroll</u> | <u>Inventory Control</u> <u>Job Cost</u> <u>Order Entry</u> <u>Purchase Order</u> <u>Point of Sale</u> <u>Sales Analysis</u> |

Version 12 Features

What's New in PBS 12.03

Here is a list by module of what is new in Passport Business Solutions 12.03:

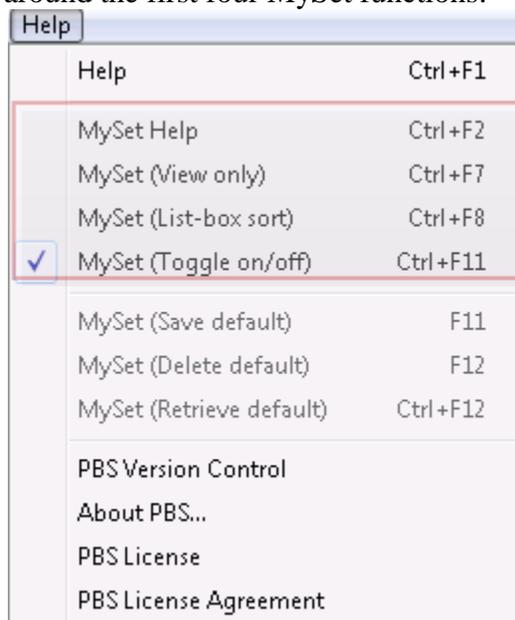

System

MySet™

MySet is a new system-wide tool that provides the following features:

- Each PBS user may set their default sorting option for any list box used in graphical mode and the graphical lookups accessible in character mode.
- A PBS Administrative user may designate any graphical mode screen as view-only, by company, for any General user.
- Each PBS user may create default field settings for any graphical mode report by company.

The MySet selections are accessible from the Help menu on any graphical mode screen or graphical lookup in character mode. Here is an example of a Help menu with a box around the first four MySet functions:

This is a brief description of each and when needed, a link for more detailed information:

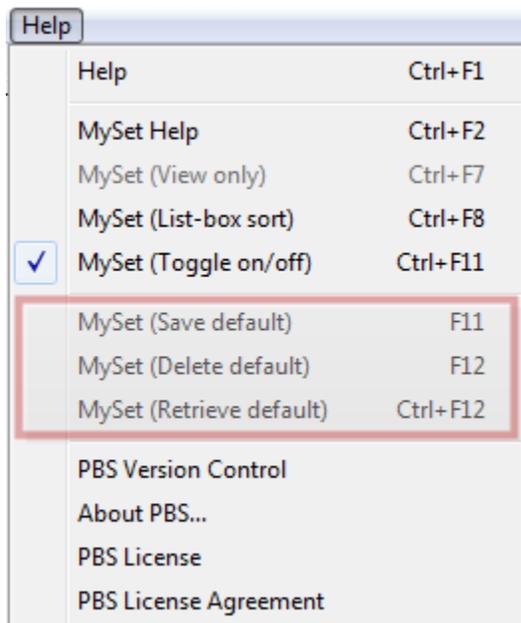

| Menu | Keyboard Access | Description |
|------------|-----------------|---|
| MySet Help | Ctrl+F2 | This accesses the MySet help in the PBS System documentation which also provides more details on MySet functions. |

| Menu | Keyboard Access | Description |
|-----------------------|-----------------|---|
| MySet (View only) | Ctrl+F7 | This allows a PBS administrative user to set up a view only screen for any general user. This selection is grayed-out and inaccessible for all general users. View only screens can only be accessed in graphical mode. |
| MySet (List-box sort) | Ctrl+F8 | This allows both administrative and general users to select a custom sort column for the list box on the screen. |
| MySet (Toggle on/off) | Ctrl+F11 | This turns MySet on or off globally for the user you are logged in as. You must turn MySet on before you can set up a default sort and to set up a general user with a read-only screen. |

MySet Field Defaults

For any user, default values for fields may be assigned to any *report* screens that can be run in graphical mode. Set the values for fields and the next time you access the screen, the default values display.

There are three selections on the Help menu that you may use for this function, as seen in the red box below:

On screens, other than reports, these selections will be grayed out and inaccessible. Here is a description of each function:

| Menu | Keyboard Access | Description |
|----------------------|-----------------|---|
| MySet (Save default) | F11 | This sets the current selected field to the |

| | | |
|--------------------------|----------|---|
| | | default value that is entered in that field. The field will flash yellow to indicate that the value is being saved. |
| MySet (Delete default) | F12 | This removes any default value for the currently selected field. The field will flash red to indicate that the value is being removed. |
| MySet (Retrieve default) | Ctrl+F12 | This allows you to retrieve a value for a selected field. This is useful in case you changed the value to something other than the MySet default and you want the MySet default back. |

Windows 8, Windows Server 2012 and SQL 2012 Now Supported

An updated runtime is part of the PBS 12.03 install that provides support for Windows 8, Windows Server 2012 and Microsoft SQL Server 2012.

Expanded Print Reports from Disk Number

To allow for more reports printed to disk, the Print Reports from disk number has been expanded from 4 digits to 7 digits. This affects any posting or regular reports generated on the system.

Pre-existing report numbers are not affected. If they were 4 digits they will remain that way. Following the install the next report number is 0100001. All numbers between the current next number and 0100000 are skipped.

Banks

When modifying a bank routing number a new warning message is displayed. If the change is accepted, the vendor and employee bank accounts are updated.

User List and Users Menu List

This feature is available in graphical mode only.

There are two new reports available from the Setup > User maintenance. From the *Options* menu you may select either of the following:

- User List
This report provides a list of users that can access the system. It includes the address, type of user, the menus assigned to the user and more
- Users Menu List

This report shows every user that is assigned to a menu from *Menu maintenance*. There is an option to print the menu details.

Accounts Payable

Check Reconciliation Interface

When interfaced to Check Reconciliation you have the option to automatically post payments to the C/R Checkbook. See the C/R *Control information* setting of [Post PBS Accounts Payable checks automatically](#).

Year end 2013

There are two new fields available for reporting 1099 forms and magnetic media. These include *Foreign tax paid* and *Foreign country or U.S. possession*.

The *Foreign country or U.S. possession* entry field is forty characters. However it will print only twelve characters on the 1099 form. The *Foreign country or U.S. possession* field does not get written to the 1099 magnetic media file.

You may enter these fields using A/P -> Year-end -> 1099-MISC reporting info.

Accounts Receivable

Check Reconciliation Interface

When interfaced to Check Reconciliation you have the option to automatically post deposits to the C/R Checkbook. See the C/R *Control information* setting of [Post PBS Accounts Receivable deposits automatically](#).

New Invoice History Purge Option

A new *Purge orphan secondary records* field is available.

This field cannot be entered unless the *Purge this history* field is checked.

The primary record is the invoice history header. Secondary records are the invoice history lines, auxiliary and serial numbers. Secondary records cannot be accessed when printing this report when the primary record is missing.

Check this field if you suspect that you have orphan secondary records. Under normal operation this will not happen. A good time to select this option is after you have upgraded from an older version, or if you have had to recover invoice history data. Secondary records print on the report when they are purged.

Graphical Screens

Graphical mode screens have been added to the following Accounts Receivable menu selections:

Deposits > Prepare deposits

Deposits > Deposit slips
 Deposits > Deposit summary

Check Reconciliation

Checkbook Transfers

A transfer type has been added to *Checkbook entries*. It transfers funds between accounts and updates General Ledger accounts appropriately.

Automatic Transfer from Accounts Payable, Accounts Receivable and Payroll

You now have the option to automatically get deposits, checks and ACH payments to the Check Reconciliation Checkbook when posting in the Accounts Receivable, Accounts Payable, and Payroll modules. When selected, they bypass the *Transfer checks/deposits* function.

New options have been added to the *C/R Control information* to allow these functions:

Post PBS Accounts Payable checks automatically

When this field is selected, Accounts Payable checks, direct deposit payments and voids are posted automatically to Check Reconciliation. The following functions are affected:

| Main menu | Sub menu | Function | Comment |
|-----------------------|-----------------------------------|-------------------------|---|
| Payables | Post | Immediate checks (void) | When voiding an immediate check, the voided check is transferred to C/R. A separate transfer register is printed. |
| Payables | Post | Immediate checks | When posting an immediate check, the check is transferred to C/R. A note is added on the register. |
| Payables | Post | Non A/P checks | A note is added on the register and it is transferred. Non A/P checks do not get transferred during check printing or when running the <i>Non-A/P/Manual Check Register</i> . |
| Open items | Post | Manual payments | Manual payments are transferred to C/R. A note is added on the register. |
| Print checks and post | Checks and ACH payments | | Checks and ACH payments are transferred to C/R. A note is added to the check register legend. Non-A/P checks are transferred when posting payables. |
| Print checks and post | Voids (all or a range of checks.) | | Checks and ACH transaction numbers that are voided when skipping numbers by entering the next number manually, are transferred to C/R. Checks that are |

| | | | |
|-------------|------|--|--|
| | | | voided after printing and before posting are also transferred to C/R. A note is added to the check register legend in all cases. |
| Void checks | Post | | Voided checks are transferred to C/R. A note is added to the register. |

Post PBS Payroll checks automatically

When this field is selected you may post PBS Payroll checks and void checks automatically.

When this field is selected the following Payroll menu selections are posted automatically:

| Main menu | Sub menu | Function | Comment |
|-------------|----------|--------------------|--|
| Checks | | Checks | Individual checks are posted to C/R |
| Checks | | ACH direct deposit | Individual ACH payments are posted to C/R. |
| Checks | | Void | Checks and direct deposit pay voided through this function is posted automatically to C/R. A note is written to the register. |
| Void checks | Post | | Entries generated through <i>Select individual checks</i> and <i>Select a range of checks</i> are posted. Transfers are indicated on the posting register. |

Post PBS Accounts Receivable deposits automatically

When this field is selected you may post PBS Accounts Receivable deposits and returned checks automatically.

When this field is selected the following Accounts Receivable menu selections are posted automatically:

| Main menu | Sub menu | Function | Comment |
|-----------------|---------------|----------|---|
| Deposits | Deposit slips | | The accumulated deposit is posted as one amount. A posting register is printed. The <i>Show deposit details</i> field (below) determines what is printed on the register. |
| Returned checks | Post | | Individual payments may be returned. |

Show deposit details

You may check the box if you want to print the deposit details when the *Checkbook Transfer Register* prints. If you prefer just the total of the register, leave the box unchecked.

Graphical Screens

Graphical mode screens have been added to the following Check Reconciliation menu selections:

- Transfer checks/deposits
- View checking information
- Reports > Account activity
- Reports > Checkbook
- Reports > Checkbook list
- Reports > Distributions to G/L
- Reports > Reconciliation

New Start-up Mode Option

Start-up mode is used when you are adding Check Reconciliation your PBS system or a new checking account to C/R. If you have pre-existing Accounts Payable checks, Payroll checks or Accounts Receivable deposits, the first time you run *Transfer checks/deposits*, it may pull in hundreds or even thousands of ‘historical’ records into the checkbook. All these records must be cleared manually before you can move out of start-up mode.

Now there is a new *Transfer checks/deposits* option to avoid pulling in the historical checks and deposits and mark them as transferred in the A/P, A/R or PR module. As a result, the implementation of Check Reconciliation is then much faster.

General Ledger

Adjusting Fiscal Years

This is a new utility that allows you to adjust your non-calendar fiscal year to a calendar fiscal year. As part of the process it backs up your older G/L data to another company.

Graphical Screen

The *Make SAF layouts* selection, found under *Financial statement layouts*, is now available in graphical mode.

Order Entry

Immediate Invoice Printing in Select for Billing

Immediate printing has been available through Order Entry *Orders (Enter)* for many years. With PBS 12.03 you can now immediately print the invoice after selecting an order for billing. After you finish entering the totals screen, a message displays asking if you want to “Print invoice?”. Select *Yes* to print the invoice or *No* to not print. In character mode enter I to print or use the (Enter) key to not print.

The *Default invoice form ID* field in *Order Entry Control information* which sets the *Orders (Enter)* immediate printing form, also sets the immediate printing form for *Select for billing*.

Limit Users from Deleting Orders

To provide additional security, there is now an option to limit certain users from deleting orders in *Orders (Enter)* and *Billing (Select for billing)*. There are two new fields in *Order Entry Control information* that implement this feature:

Require Admin login to delete orders

When checked, only an Administrative user may delete an order. A General user may not delete an order. This field may be used with the next field, *Admin ID*, which creates an additional restriction.

In the *Control Information* chapter of the *Order Entry* user documentation there is additional information about the restrictions.

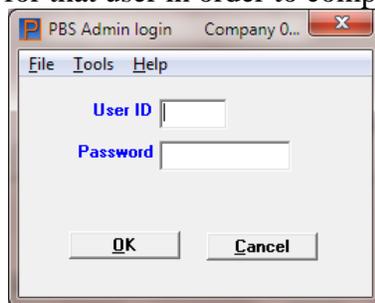

Admin ID

If you checked the *Require Admin login to delete orders* field, you have the option to enter a *User ID* in this field. You may only enter an Administrative user ID.

If you leave this field blank any Administrative user can delete orders. No General users may delete orders.

When you enter an Administrator user ID in this field:

- When selecting to delete an order in *Orders (Enter)* and *Billing (Select for billing)*, you will be prompted to enter the matching *User ID* and password for that user in order to complete the deletion. This is the window:

- Only the person logged in with that *User ID* may edit this field. For example, if the entry in this field is PSI, the only user that can edit this field is the one that logs in with the PSI User ID.

Access the Accounts Receivable View Invoice History from Order Entry View Invoice Screens

On the graphical mode screens for the *View* menu selections *Invoice history by customer*, *Invoice history by invoice* and *Invoice history by item*, a new menu selection is provided to access Accounts Receivable *View Invoice history*. When accessed it will locate and display the matching invoice.

Print Extended Weight on Forms

When designing a form there is now an option to include the extended weight. The extended weight is the weight for one item times the number of items shipping.

Ship in Full

In a shipping and receiving environment you may have a full quantity available for an item but the receiving has not been entered in Inventory Control or Purchase Order. The lines on an order indicate the item is backordered.

In order to save time, a new "F7" = Ship in Full" function key option has been added to the *Select for Billing* line item selection window. Hitting F7 selects the line even when the item is backordered. When the item is backordered the backorder quantity is changed to zero and the quantity to ship is changed to match the order quantity. You do not have to go through the entire *Edit, click on the field, enter the quantity, Save* cycle when you know that the full quantity is actually available.

If you decide to use this feature, keep in mind that when the items are eventually received in inventory, the costs could be different than what is used when you post the invoice. This could result in less profit on the invoice line. If the full quantity is not available for a serialized or lot control item it cannot be selected in full.

Payroll

Direct Interface to Check Reconciliation

When interfaced to Check Reconciliation you have the option to automatically post payments to the C/R Checkbook. For the Check Reconciliation *Control information* setting see [Post PBS Payroll checks automatically](#).

Windows Printer Checks and Direct Deposit Mailer Formats

A new, more modern looking check and direct deposit mailer format is provided for PBS 12.03. It prints the check at the bottom of the page and the remaining upper two-thirds of the page is the stub. The stub format provides additional space for printing more deduction information in a clearer, easier to read manner. This new format requires using *Windows printer* only. This new form type is available from [Trainer Printing and Promotions](#) at 847-296-2900.

You must use a *Company information* laser printer or dot matrix printer for the older check and mailer form types.

IDES State of Illinois Reporting

A new report is provided to comply with the Illinois Department of Employment Security. This is a modified version of the Payroll Employee history report.

Positive Pay

To make positive pay more flexible and to comply with requirements for more banks, we now allow the employee name to be formatted in different configurations for the positive pay file.

Employee Insurance Premium Field Expanded

To comply with larger insurance premiums, the *Employees W-2 ins premium* field was expanded from a maximum of \$9,999 to \$999,999. This same expanded field is used for year-end reporting.

Year end 2013

There are two new fields available for reporting 1099 forms and magnetic media. These include *Foreign tax paid* and *Foreign country or U.S. possession*.

The *Foreign country or U.S. possession* entry field is forty characters. However it will print only twelve characters on the 1099 form. The *Foreign country or U.S. possession* field does not get written to the 1099 magnetic media file.

You may enter these fields using PR -> Year-end -> Enter 1099 information.

Point of Sale

Sales Rep Number on Transaction Lookup

We have added the sales rep # as the column heading to the transactions lookup.

PBS Manufacturing: Inventory Management

Physical Inventory Freeze

We have added the physical inventory function of "freezing" the inventory when it's time to take a physical inventory. This will allow you more time to reconcile your inventory while not holding up daily transactions.

Costed Inventory Status

We have added an option to the *Costed inventory status* report to net negative values against the positive values to show a more accurate number when comparing to the General Ledger at month's end.

Shop Order Traveler

This is an enhanced version of the Shop Order Pick List which is a list of items required to manufacture the product being made on a shop order. The information provided on the Pick List includes basic Shop Order information, a list of components and the total quantities required, as well as shop order comments. This report is also available in Shop Floor Control (S/F).

Post Stockroom Counts

There is often a delay between the time that inventory is counted and when the results are posted. The *Post stockroom counts* allows posting in the correct period.

A question was added to the entry screen "4. Use today's date or count date for transactions?" with the entry of either C= Count or T = Today's date.

SQL Conversion

When upgrading from 12.02 to 12.03 a new upgrade in place conversion is now provided.

More PBS Enhancements

The full graphical version provides new screens and new conventions for data entry. If you are upgrading from a version prior to version 12, see the [Version 12 Features](#) section.

When using character mode screens, the graphical lookups developed in PBS 12.00, are now accessible. They have easy click sorting and when appropriate, a "More info" button allows access to all the record data.

There may be a more recent version of this document online. Please download the latest [Version 12.03 Standard Installation Instructions](#). Check the second page for the date of this document. Use the downloaded version if it is more recent.

If you are installing the SQL version of PBS, download the [PBS SQL Install Guide](#).

PDQ Limitations

Due to file changes in v12.03, PDQ now has some limitations.

Most of the queries work as they did in 12.02 and earlier. However, some of them will not function properly or completely. These include:

| Query | Data source | Issue |
|--------------------------------|--------------------|---|
| AP Vendor History- Sample #3 | Vendor history | The data is not accurate for any field after the Journal # field |
| AR Cash History – Deposits | A/R Cash History | The data is not accurate for any field after the Journal # field |
| AR Cash History - Receipts | A/R Cash History | The data is not accurate for any field after the Journal # field |
| GL Transaction Master File | G/L Transactions | The data is not accurate for any field after the Journal # field |
| IC Item Transaction History | I/C Trx History | The data is not accurate for any field after the Journal # field |
| IC Serial# Transaction History | Serial History | The data is not accurate for any field after the Journal # field |
| PR Employee Master | Employee file | The data is not accurate for any field after the Term Insurance Premium field |

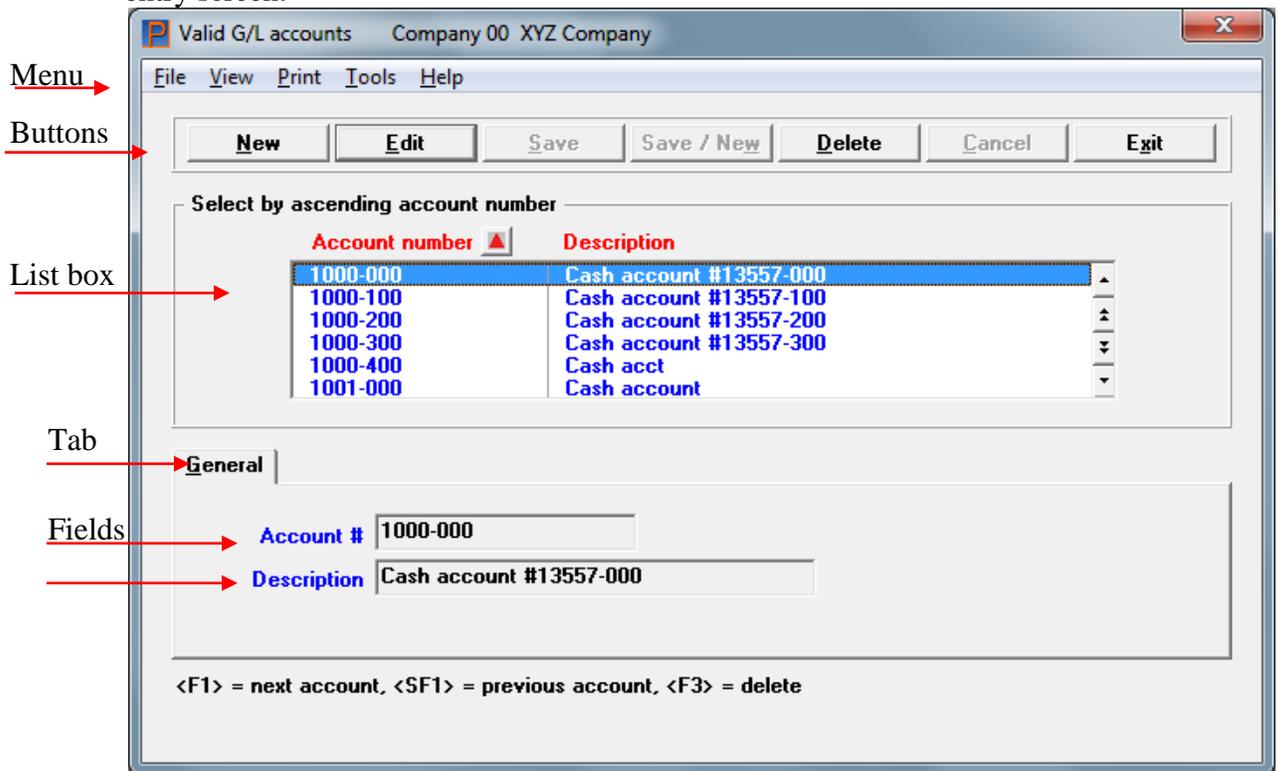

Additional Version 12 Features

This section provides information about features and enhancements that have been added to PBS for the version 12.00 release. They are new if you upgraded from version 11.x or earlier.

With Version 12 Passport provided the first full graphical version of Passport Business Solutions. With v12.01, 12.02 and 12.03 we have increased the number of graphical screens. For a complete list of all graphical screens, see the [Complete List of Graphical Screens](#) section.

Graphical User Interface

Each graphical screen has several new elements. The full list of elements includes tabs, buttons, list box/lookups and menu. This is an example of a data entry screen:

The *Valid G/L accounts* example above has only the General tab. Many screens have only one tab, but several have multiple tabs.

The list box headings in **red** indicates that they can be sorted. In this case, both fields can be sorted. For most list boxes there are also fields that cannot be sorted.

In the above tab example, the **Account #** and **Description** fields are in blue using the default Windows Color scheme. Depending on the workstation Color scheme selected, field names are in black or blue. Black indicates that the field is not required to be entered and blue is required.

Control information screens have a menu, buttons and tabs/fields, but do not have a list box.

Report screens have a menu, tabs and fields, but do not have a list box and they do not have a row of buttons at the top. They do have OK and Cancel buttons at the bottom. Clicking on OK means you print the report and Cancel indicates you are not printing.

Buttons

There are three modes when on a PBS graphical screen: add, select and edit. Add mode means you are adding a new record. Select means that there are existing records and you are selecting one of them to view or edit. Edit mode means that you have selected a record and you are now editing it.

Some buttons are active in add mode, others in select mode and others in change mode. These are the buttons active in select mode:

The buttons and keyboard equivalents include:

| Button | Keyboard | Description |
|----------|----------|---|
| New | Alt+n | To enter a new record |
| Delete | Alt+d | To delete the record selected in the list box |
| Edit | Alt+e | To edit the record selected in the list box |
| Save | Alt+s | To save a new record or changes to an edited record |
| Save/New | Alt+w | Same as Save and New buttons, but done simultaneously |
| Cancel | Alt+c | To cancel adding or editing a record |
| Exit | Alt+x | To exit the screen. You may also use the <Esc> key |

The transaction and master file screens have the use of the above buttons. Not all buttons are available on all screens. For example, a *Control information* screen only allows Edit, Save, Cancel and Exit.

For some screens there may be special buttons. For example, Order Entry *Orders - Enter* there is a button to access the Line items.

Report screens only have OK and Cancel buttons at the bottom. Clicking on OK means you print the report and Cancel indicates you are not printing.

Tabs

In the middle of the screen you will see tabs. Tabs allow you to access additional fields for the same record. You can move back and forth from one tab to another when viewing entered data. In the Vendors example below the General tab is selected:

The screenshot shows a web-based form for a Vendor record. At the top, there are four tabs: "General", "Terms", "Accounts", and "Totals". The "General" tab is selected and circled in blue. Below the tabs, the form is organized into several sections:

- Name and address:** Vendor ID 100, Name "Vermont Metal Product", Address 1 "410 Pinecrest Road", Address 2 "Suite 100", City "Newton", State "VT", Zip "12345-0453", and Country "USA".
- Contact 1:** Name "John Smith", Phone "802-445-9134", Fax "802-445-1710", and E-mail "jsmith@vmp.com".
- Contact 2:** Name "Howard Brice", Phone "802-445-9136", Fax (empty), and E-mail "HBrice@VMP.com".
- Default contact:** No. "1", Name "James Canary", and Title "CFO".

You will notice that there are three other tabs at the top of the screen: Terms, Accounts and Totals.

While scrolling through the Vendors, you may be on any tab. For example: the Vendor's Balance is on the Totals tab and now you can scroll, viewing the balance for each.

List Boxes/Lookups

New list boxes and lookups provide an easy way to find your data. There are three types of list boxes: Main file list box, lookup list box, and drop down list box. There are two types of Lookups: Data Lookup and Calendar Lookup.

Main File List Box

The main file list box displays a list of up to six records for the file being accessed. It is located near the top of the window.

Depending on how the file is defined, a list box may be sorted on different fields. By default the vendor list box is sorted by name.

To change the sort, select the View menu and then select Vendor number. If the field is in red, you may also click on the field heading to change to a different field or reverse the sort order. When sorting by vendor number the list box looks like this:

In addition to the date being in a different order, the display above tells you the sort has changed.

Lookups

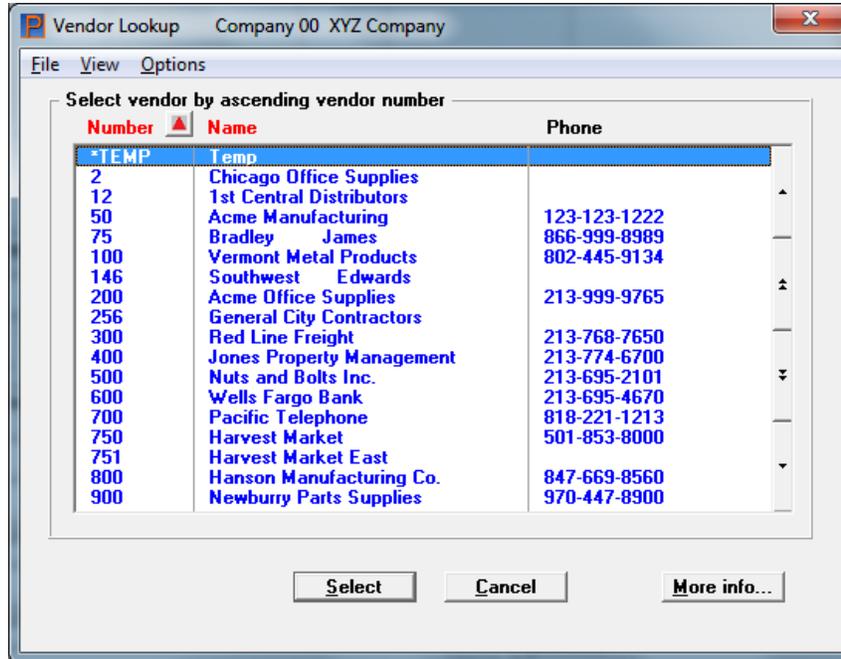

The Data Lookup list box has many of the same features as the Main list box above. The main differences are:

1. Up to 16 records display
2. In some cases there is a *More info* button that provides access to a read-only version of the main master or transaction record screen.

Access to a Data Lookup list box can be done by selecting the binocular button or pressing the <F8> key. Here is an example of a field with the binocular button:

Here is an example of the Vendor lookup window:

Record Search and Case Insensitivity

To find a record in a main file or lookup list box, while the focus is on the box, **simply start typing** what you are searching for. What you type depends on how the data is sorted. In the example of vendors, if the list box is sorted by vendor name ascending or descending, start typing the vendor name and as you type more letters the program narrows the search until you find the correct one. If you want to search by vendor number, change the sort to vendor number and type.

When looking for a record, the lookups are now case insensitive. For example, when looking for a vendor by the vendor name, if the record is stored in uppercase "SULLIVAN", you may type lowercase "sullivan" and it will find the record.

Calendar Lookup

The Calendar Lookup provides an easy way to find a date. Either pressing <F4> or clicking on the Calendar button accesses it. Here is an example of a field with the Calendar button.

The Calendar Lookup allows you to select a date for entry into the field. The field name displays in the title bar. You may select any date from the month selected. You may change the month and year. Here is an example of the Calendar Lookup:

Drop Down List Box

A drop down list box provides multiple preprogrammed choices for a field. Here is an example of the 1099 type field list box.

Menu

At the top of every screen there is a menu. The number of menu selections varies depending on the screen. Here is a list of the categories of selections:

File

This menu has the same selections as the buttons. Not all will be active on every screen. See the description of the [buttons](#).

View

If the selected file has more than one sort order, this menu displays the sort options.

Print

This is not available on all screens. This accesses reports and edit lists selections that correspond to the selected screen.

For example, on the *Vendors Enter* window the *Print* menu has *Print vendors by vendor number*, *Print vendors by vendor name* and many more selections.

Options

This screen has options that correspond to the selected screen. It may access other related entry screens, view screens and posting.

Tools

This menu selection accesses two types of tools: Lookup and Main menu tools.

1. Lookup. There are two lookup types of data (Find) and calendar. These selections are only active if you are on either a field that accesses another file or a date field respectively.
2. Main menu tools: The same button options from the main menu are available. These include Print screen, Email, Calculator, Notepad and Web browser.

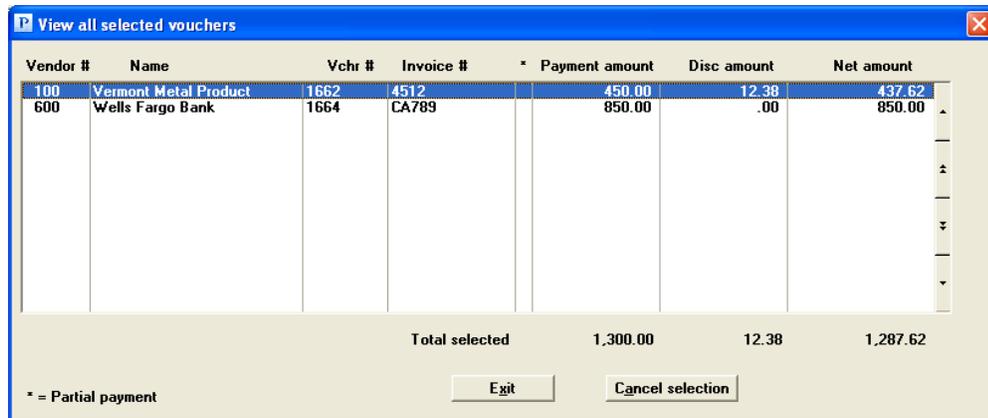

Help

This accesses the new HTML help for Version 12. See the next section for a full description of the new HTML help.

Starting with 12.03, the menu also accesses the MySet features. See [MySet™](#).

Accounts Payable – Prepare payments

When preparing payments by selecting individual vouchers, there is a new option in graphical that allows you to view all selected vouchers. Here is the window with the new features:

| Vendor # | Name | Vchr # | Invoice # | * Payment amount | Disc amount | Net amount |
|----------------|-----------------------|--------|-----------|------------------|-------------|------------|
| 100 | Vermont Metal Product | 1662 | 4512 | 450.00 | 12.38 | 437.62 |
| 600 | Wells Fargo Bank | 1664 | CA789 | 850.00 | .00 | 850.00 |
| Total selected | | | | 1,300.00 | 12.38 | 1,287.62 |

* = Partial payment

Exit Cancel selection

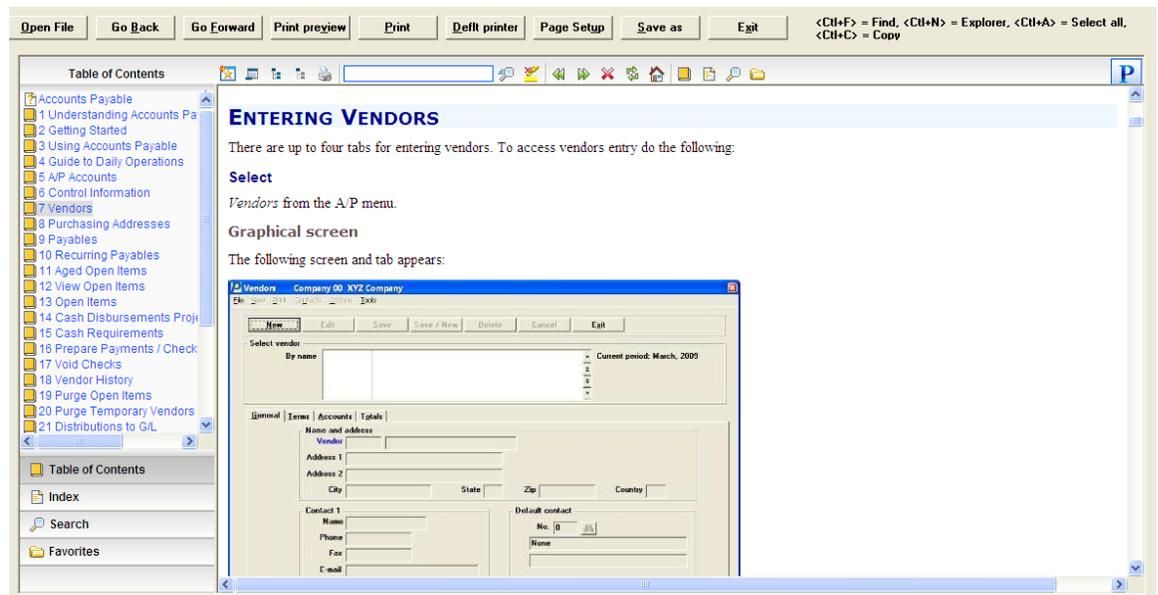

You may view all the selected vouchers. Totals display at the bottom of each amount column. There is a button called *Cancel selection* where you can unselect any voucher already selected.

HTML Help

On the graphical screens, help is now HTML based. Help can be accessed via the <Ctrl+F1> keys. You may also access it from the menu by selecting Help.

There are several advantages to the new help:

1. When accessing help for a field or screen, you are accessing the documentation for a complete chapter and not just the help for one field.
2. You are viewing the help from a web site. This means Passport can produce more up-to-date documentation at any time so that the next time you access help, it may be improved.
3. You can work in PBS while viewing help in a separate window.
4. You can access the full documentation for the entire application with navigation from the field or screen you are on. To do this, open the doc from the field or screen you are on, go to the end or beginning of the page and select the link *Open topic with navigation*. This link provides access to the full module doc where you can search through multiple chapters, designate favorite locations in the documentation, and more. Here is an example of help navigation screen.

The full navigation help is also available from the Web browser button.

You may install the help files for local access. This is necessary when your PBS workstation computers do not have Internet access. Installing the local help also provides faster access to the help. Do not install the help locally if you are using Thin Client.

Character vs. Graphical Options

There are two ways to switch from character mode to the new graphical mode.

1. From any screen that is available in graphical mode, select the <Sft+F12> keys and it switches from the current mode to the other.
2. For the default setting per user, go to CTL > Setup > User maintenance. Find the field called *Full graphical*. If it is checked (Y), it is in graphical mode. If it is unchecked (N), it is in character mode. The EZ Convert utility sets this field to graphical.

V12 Future

We are in the process of making more graphical screens throughout PBS. Look for these in future releases. Screens were added for A/R, and C/R for 12.03. For a list of version 12.03 graphical screens see [Complete List of Graphical Screens](#).

Distribution History - Navigation

With PBS Version 12 you now have access to distribution history. The viewing of distribution history is accessible in Accounts Payable and General Ledger. From General Ledger there is a link back to the Vendor history.

Distributions before Version 12. There is no file from which to get a distribution history in Version 11.7.9 and earlier. Following the conversion to version 12, only entries going forward will have distribution history.

Accounts Payable

Before you can navigate to distribution history, you must enter and post payables in version 12. If you print checks for those payables you will see the full navigation history.

To see the distribution history in Accounts Payable select *View vendor invoices*. Select a vendor and select the invoice. The General tab will look something like this:

| General | | Vendor info | |
|--------------|------------|-----------------|-----------------------|
| Vendor # | 100 | Vendor name | Vermont Metal Product |
| Invoice # | 123 | Voucher # | 1594 |
| P. O. # | | Contact | John Smith |
| Invoice date | 07/27/2009 | Original amount | 21.00 |
| Dist date | 07/27/2009 | Discount amount | .58 |
| | | Reference | |
| | | Retainage | |

| Date | Type | Check # | Cash Account | Jrnl # | Amount Paid | Disc Taken |
|----------------|--------------|---------|----------------------------------|--------|-------------|------------|
| 07/27/2009 | * Invoice | | | AP1600 | -21.00 | -.58 |
| 07/31/2009 | * Invoice | | | AP1721 | -100.00 | -2.75 |
| 07/31/2009 | Non-A/P chk | 1286 | 1000-000 Cash account #13557-000 | AP1721 | 100.00 | 2.75 |
| 08/10/2009 | Manual chk | 1111 | | AJ1825 | 11.00 | .58 |
| 07/28/2008 | Computer chk | 1263 | | AK1604 | 10.00 | |
| Totals applied | | | | | -21.00 | -.58 |
| Balance | | | | | .00 | .00 |

View distribution history

In the lower left corner you will see the *View distribution history* button. If it is highlighted, that means there is a distribution history for the selected invoice.

Select the button and a screen like the following displays:

Distribution history

| Distribution acct | Cash account | * | Amount | Reference | Jrnl # | Dist date | Distribution type |
|-------------------|--------------|---|--------|-----------|--------|------------|----------------------|
| 5020-200 | | | 21.00 | | AP1600 | 07/27/2009 | Expense distribution |
| 2000-000 | | | -21.00 | | AP1600 | 07/27/2009 | Transaction added |
| 4050-000 | 1000-000 | | -.58 | | AJ1825 | 08/10/2009 | Discount taken |
| 2000-000 | 1000-000 | | 11.00 | | AJ1825 | 08/10/2009 | Paid |
| 1000-000 | | | -10.42 | | AJ1825 | 08/10/2009 | Check amount paid |

* = Correcting entry

Account description: Purchases - tools

Voucher: 1594 Invoice #: 123 Check #:

Vendor: 100 Vermont Metal Product

Exit

The Accounts Payable documentation section [View Distribution History](#) from the *Vendor history* chapter has a full explanation of the features.

The Open items > View selection has the same type of features. See the [View Distribution History](#) section from the *View Open Items* chapter.

General Ledger

Enter and post new payables in Accounts Payable in PBS v12.0. At the appropriate time of the month, select *Distributions > Get distributions* for A/P. Post the distributions. From the General Ledger menu select *View accounts*.

Select the account and date range that will include the data from Accounts Payable. The *View source transaction* and *View related distributions* buttons should now be accessible like this example:

| General | | | | | | | | |
|--------------------|-----------|-----------|------------------------|--------------------|--------|------------|--------|--|
| Date | DR amount | CR amount | Reference | Journal# | Source | Document# | F-Year | |
| 08/10/09 | | 303.58 | Vermont Metal Products | AP0373 | AP | 2134 | 2009 | |
| 08/10/09 | 303.58 | | Vermont Metal Products | AP0374 | AP | 2134 | 2009 | |
| 08/10/09 | | 303.58 | Vermont Metal Products | AP0375 | AP | 8945 | 2009 | |
| 08/31/09 | | 755.95 | Vermont Metal Products | AP0507 | AP | 54321 | 2009 | |
| 08/31/09 | | 211.00 | Vermont Metal Products | AP0527 | AP | 3456 | 2009 | |
| * Correcting entry | | Total DR | Total CR | Beginning balance: | | 303.58 | | |
| | | 303.58 | 1,574.11 | Net change: | | 1,270.53CR | | |
| | | | | Ending balance: | | 966.95CR | | |

Selecting *View related distributions* displays a screen that has all the distributions with the same journal number.

Click on the *View source transaction* and the original voucher in Accounts Payable displays. It will look similar to this:

| Selection criteria by invc # | | | | | | | |
|------------------------------|------------|---------------|-------|------------|--------|---------|--|
| Invc # | Invc date | Type | Chk # | Chk date | Vchr # | P. O. # | |
| 3456 | 08/31/2009 | Invoice | | | 1254 | | |
| 54321 | 08/31/2009 | Invoice | | | 1252 | | |
| 54322 | 08/31/2009 | Invoice | | | 1253 | | |
| 54322 | 08/31/2009 | Prepaid check | 1312 | 08/31/2009 | 1253 | | |
| 8945 | 08/10/2009 | Invoice | | | 1251 | 100 | |
| 8945 | 08/10/2009 | ACH check | 1111 | 05/17/2008 | 1251 | | |

| General Vendor info | | | | | | | |
|---------------------|------------|-----------------|------------------------|-----------|--------------|--|--|
| Vendor # | 100 | Vendor name | Vermont Metal Products | | | | |
| Invoice # | 3456 | Voucher # | 1254 | Contact | John Smith | | |
| P. O. # | | Original amount | 211.00 | Phone | 802-445-9134 | | |
| Invoice date | 08/31/2009 | Discount amount | 4.22 | Reference | | | |
| Dist date | 08/31/2009 | Retainage | | | | | |

| Date | Type | Check # | Cash Account | Jnl # | Amount Paid | Disc Taken |
|----------------|-----------|---------|--------------|--------|-------------|------------|
| 08/31/2009 | * Invoice | | | AP0527 | -211.00 | -4.22 |
| Totals applied | | | | | .00 | .00 |
| Balance | | | | | 211.00 | 4.22 |

From here you select the *View distribution history* to see all the related distributions for this invoice like in the Accounts Payable *View vendor invoices* as in the previous example.

Complete List of Graphical Screens

The following is a list of all the screens in PBS Version 12.03 that use the full graphical mode. This includes all the screens that were made graphical in the 12.00, 12.01, and 12.02 versions.

The applications that have graphical screens include A/P, A/R, C/R, G/L, I/C, O/E, PR, SY and Manufacturing. Additional screens from these and other applications will be released in graphical mode when they are ready.
